

Samran Taimoor

SOFTWARE ENGINEER • FULL-STACK • AI SYSTEMS

Gujrat, Pakistan +92 303 6230707 samrantaimoor35@gmail.com
samrantaimoor.com github.com/samran178 linkedin.com/in/samran-taimoor

TECHNICAL TOOLBOX

- **Frontend:** React.js, Next.js, TypeScript, JavaScript ES6+, Vite, Tailwind CSS, HTML5/CSS3
- **Backend:** Python, Django, Flask, Express.js, REST API design
- **Databases:** PostgreSQL / NeonDB, SQL Server, ChromaDB, schema design, data migration
- **AI & LLM:** RAG pipelines, LangChain, LangGraph, CrewAI multi-agent workflows, LLM API integration
- **Tools:** Git/GitHub, VS Code, WebSockets, Web Speech API, PDF processing

WHAT I DO WELL

- Take a vague business problem through to a scoped, shipped, maintained product
- Design relational schemas and run live data migrations on a running product
- Own client communication end to end: discovery, estimate, delivery, handover

EDUCATION

BS Software Engineering
University of Gujrat, Pakistan
2022 – 2026 • CGPA 3.25 / 4.00

Availability: open to remote roles worldwide and to relocation.

PROFESSIONAL SUMMARY

Developer and database engineer at **Marsos (marsos.co)**, an enterprise technology consultancy, where I build and maintain the company's production platform and own its database layer, alongside independent client delivery through NovaWeb Studio. Work spans React/Next.js and TypeScript front ends, Python and Node back ends, PostgreSQL data modelling, and LLM-backed features such as RAG search and multi-agent workflows.

Marsos

Current role — software and database engineering on a live production platform

AI Systems

RAG pipelines, multi-agent workflows, and LLM document tooling, shipped

End-to-End

Scoping, build, deployment, and post-launch support on client work

EXPERIENCE

Developer & Database Engineer • Marsos CURRENT 2025 – Present

marsos.co • Enterprise technology consultancy • Remote

- Rebuilt and now maintain the company platform at marsos.co, and migrated its data layer from local storage to NeonDB managed PostgreSQL on a hosted, backed-up relational schema.
- Own database work across client projects: schema design, data-model review, migrations, and keeping application data consistent as features change.
- Scope and specify client systems before build, including a warehouse management system covering inventory, order flow, and fulfilment for a quick-commerce client's dark stores.
- Built and run the outbound client pipeline: market research, qualification against a defined service fit, and structured lead dossiers tracked in a shared pipeline.

Freelance Software Engineer • NovaWeb Studio Aug 2025 – Present

Self-employed • Remote

- Build and ship custom websites and web applications for small businesses and early-stage clients, covering discovery, UI, implementation, deployment, and maintenance.
- Translate requirements into responsive interfaces with reusable component structure and realistic delivery milestones.
- Run the full cycle solo: scoping, estimation, version control, testing, and post-launch fixes.

FLAGSHIP PROJECT

PaperBot — Exam Management & Assessment Platform

REACT • PYTHON BACKEND • SQL DATABASE • LLM API • PDF PROCESSING

Final Year Project for university exam workflows: faculty-side paper creation, AI-assisted question generation from uploaded PDFs and lecture notes, exam publishing controls, student assessment flows, and automated grading suggestions. Built as a full-stack system: React client, Python services, relational storage, and an LLM layer constrained to the uploaded source material.

PROJECT PORTFOLIO

Marsos Platform — marsos.co

NEXT.JS • REACT • TYPESCRIPT • POSTGRESQL / NEONDB

Production platform for an enterprise technology consultancy. Rebuilt the site and moved its content and case-study data off local storage into a managed PostgreSQL database with a proper relational schema, backing a filterable delivery portfolio and an integration catalogue of 160+ third-party platforms grouped across 20 capability categories.

NEXUS_INTEL

REACT • EXPRESS • POSTGRESQL • CREWAI

Multi-agent market intelligence pipeline. Agents research a target market and produce competitor tables, SWOT breakdowns, and downloadable reports. Long-running agent jobs stream live progress to the UI instead of blocking the request, and results are persisted to PostgreSQL for re-export.

DocuMind-AI

PYTHON • STREAMLIT • LANGCHAIN • CHROMADB

Retrieval-augmented PDF assistant. Chunks and embeds uploaded documents into a vector store, then answers questions against the indexed content with the source passages attached, so every answer stays traceable back to the document rather than to the model.

SignalFlow

REACT • WEBSOCKETS • RECHARTS

Real-time infrastructure monitoring dashboard. Streams CPU, memory, and request-volume telemetry over a persistent WebSocket connection, buffers incoming points client-side to keep charts smooth under load, and raises alerts as thresholds are breached.

EDUCATION

BS Software Engineering • University of Gujrat

2022 – 2026

Gujrat, Pakistan • CGPA 3.25 / 4.00

Coursework focus: software architecture, data structures and algorithms, database systems, web engineering, artificial intelligence, and software project management. Final Year Project: PaperBot, an LLM-assisted exam management and assessment platform.

ADDITIONAL HIGHLIGHTS

Production Platform Ownership

Rebuilt and maintains marsos.co end to end, including the live migration of its data layer onto managed PostgreSQL without loss of existing content.

Public Engineering Portfolio

Open GitHub portfolio covering document intelligence, multi-agent research, telemetry monitoring, and browser-side automation. Code and READMEs are available for review.

Independent Client Delivery

Runs NovaWeb Studio as a solo engineering practice, handling discovery, scoping, delivery, deployment, and post-launch support directly with clients.

ADDITIONAL PROJECTS

VoicelInvoice-AI — React, Web Speech API, jsPDF. Converts a spoken job summary into structured invoice line items and a downloadable PDF, entirely in-browser.

Veritas-Core — React, Tailwind, Recharts. Client-side content forensics dashboard computing perplexity, burstiness, and repetition signals at sentence level.

S.C.O.A Agent — React, CSS 3D, SVG. Supply-chain optimisation simulation with an isometric interface and SVG routing paths for rerouting scenarios.
